

research in brief

Bibliography of Women in Management

The authors have developed an annotated bibliography of over 100 items, many research based, which may have a direct effect on women in management roles. Included are books, training methods, and several dissertation abstracts. Most of the entries included in the bibliography are since 1971.

Editor's Note

Although the bibliography was developed for women in relation to management positions, the material appears to be applicable to both men and women. Since we're involved in equal opportunity employment programs, this would be a valuable booklet for Extension personnel officers or training specialists, as well as people who are potentials for management positions in Extension.

Women in Management: A Bibliography. Joseph Caligure and Jack Krueger. Kansas City: University of Missouri, School of Education, 1977. (Available through ERIC System—Document 148-711).
